This report is based on input from 76 salaried technical/marcom writers and documentation managers. Access to survey results is limited to participants who are either members of elephant or subscribers to the survey (participants receive a highly subsidized subscription price). For details go to http://elephant.org.il/join_now .

## Survey Participation

| Fiscal Quarter | Participants | Notes | No Work | \% |
| :---: | :---: | :---: | :---: | :---: |
| Q4 2006 | 133 | Q4 2006 data was gathered over a 3month period. Starting in Q1 2007 |  |  |
| Q1 2007 | 91 |  |  |  |
| Q2 2007 | 92 | 1 writer is between jobs 3 moved from contracting to in-house | 1 | 1.09\% |
| Q3 2007 | 83 | 1 writer is between jobs 1 moved from contracting to in-house | 1 | 1.20\% |
| Q4 2007 | 84 | 1 writer is between jobs 3 stopped reporting (1 left the profession, 1 died in a tragic car accident, 1 - data was suspect) | 1 | 1.19\% |
| Q1 2008 | 112 | Data for an additional writer was corrupted and removed | 0 | 0.00\% |
| Q2 2008 | 106 | 2 writers are between jobs <br> I did not have time to check against list of freelance writers | 2 | 1.89\% |
| Q3 2008 | 86 | 5 writers are between jobs I did not have time to check against list of freelance writers | 5 | 5.81\% |
| Q4 2008 | 85 | 6 writers are between jobs and a number of others lost there jobs soon after the reporting period I did not have time to check against list of freelance writers | 6 | 7.06\% |
| Q1 2009 | 76 | 9 writers are between jobs | 9 | 11.84\% |

## Percentages

Percentages were rounded according to mathematical rounding rules, so the sum of percentages may equal 99 or $101 \%$. Salaries for writers between jobs are not included, but the statistics on writer makeup are included in some of the breakdowns.

## Adjusted Salaries

The salaries are adjusted to include the value of a company car. When no car is taken, the adjusted salary is the same as the gross salary. When an employee gives up gross salary in return for a car, that amount is added to the gross salary. When an employee receives a car in addition to salary, an estimated value of the car is added to gross salary based on the cost to the employer or other information available.

Information on bonuses was separated out, so even in special cases where a minimum annual bonus or 13th month salary is known, the monthly equivalent is NOT included in the adjusted salary.

Adjusted salaries do not include performance bonuses, value of stock options, educational fund, pension or other benef

## Average, Median and Percentiles

Average is calculated by adding up all salaries and dividing the sum by the number of salaries reported. Average = SUM / \# of entries.
Median is what is the salary for the person in the middle, with the same number of people earning the same or more as those earning that salary or less.

Percentiles are a ranking of entries with the lowest at 1 and the highest at 100.
$\mathbf{2 5 \%}$ salary means that $\mathbf{2 5 \%}$ earn that salary or less, and $75 \%$ earn that salary or more. This is a low-end salary - most writers earn more.
$\mathbf{5 0 \%}$ salary means that $50 \%$ earn that salary or less, and $50 \%$ earn that salary or more. This is what the average, run-of-the-mill technical writer should expect to earn.
$\mathbf{7 5 \%}$ salary means that $75 \%$ earn that salary or less, and $25 \%$ earn that salary or more. This is what a writer who is the starting point for a high-end salary.
$\mathbf{9 0 \%}$ salary means that $90 \%$ earn that salary or less, and $10 \%$ earn that salary or more. This is a high-end salary - these figures are not included in this report, but I do have them for personal consulting.

## Accounting for Part-Time

Most technical writing and marcom employees work full-time. Most of those who do work part-time appear to do so by choice either fo FT Adj. Salary = Adj. Salary / \% of employment

## Salary Change Over Time

Overall we see an increase at the low end and a drop at the high end. This indicates that companies are either laying off more writers at the high end or replacing writers with less expensive writers

## Writers Between Jobs

Only those who reported in the past are allowed to report as between jobs. Between jobs only refers to being unemployed at the start of the reporting period, even if the reportee has a solid job offer in hand. It does not include those who changed jobs and during the previous quarter. A small number of employees between jobs does not necessarily indicate a slowdown, but growing numbers are important to watch for. At the start of Q1 no participants reported being between jobs, in Q2 2 writers reported being between jobs, Q3 the number rose to 5 , Q4 the number rose to 6 , and this quarter it reached 9 . The increase is even more significant when you take into consideration that fewer participated this quarter as salaried employees.

Job Security
This quarter new questions were added regarding job security. Only 51\% reported that their job was secure. In addition to the number of writers out of work, one reported still being formally employed but having received notice and another 8 reported that their job is in danger.

Salaries by Membership in a Professional Organization

## Writer Types

Data for writers who reported $50 \%$ Technical Writer/50\% Marcom Writer was weighted to include $50 \%$ of their true value in each category to more accurately reflect the breakdown of salaries. For example, if 10 writers reported salaries as technical writers and 10 as $50 \%$ Technical Writer/ $50 \%$ Marcom Writer the calculation for the average was (10*TW salary + (10*TMW salary/2))/(10 + (10/2)). Median and percentile breakdowns followed the same principle.

## Age

Age discrimination appears to have explained some of the anomolies in the relationship between salaries and experience in the past. Since the start of the survey we have seen a consistent pattern of change. However this quarter shows a change that should be watched carefully.

## Experience

## Company Size

This breakdown has been one of the most interesting and volatile breakdowns over the past year.
$12 \%$ reported working for small companies of up to 50 employees (down 6\%), $21 \%$ at companies with 50-100 employees (down 1\%), $32 \%$ at companies with 101-300 employees (up 7\%) and $35 \%$ at companies with $301+$ employees (no change).

Salary by Company Size

Sex
A growing pattern of higher salaries for men is becoming apparent. This was not the case nearly a year ago.

## Geography

Traditionally this has been considered to have a major impact on salary. Differences are most extreme at the low end and the 04 area code which has proved to be extremely volatile over time has the lowest median salaries. However writers in the 04 area traditionally have a very high rate of mobility between freelance and salaried status so anyone interested in this area code should also read the freelance rate report.

## Benefits

## Pension/Bituach Menehalim

The table below shows what percentage of gross salary the plan is based on

## Education Fund (Keren Hishtalmut)

The table below shows what percentage of gross salary the employer pays into the plan. Employees must pay $2.5 \%$ into the plan.

Stock Options and Employee Stock Purchase Plans
Stock options and Employee Stock Purchase Plans have become very common benefits.

## Salary Increases/Decreases (Raises and Job Changes)

This statistic is based only on those writers who reported as employees in the relevant quarters. For the 1 quarter change this means this quarter and last quarter. For the 1 year change this mean this quarter and 1 year ago. It does not include writers who joined the survey this quarter, writers who moved from freelance to employees, or writers who are between jobs.

There are two sets of figures, one includes only data from those with changes and the other includes all those who reported in both relevant quarters.

Since the charts are difficult to understand I will explain what they mean. Of the nearly $80 \%$ for whom I have data for the same quarter last year, the average salary change was a decrease of $1.53 \%$. Of those who reported a change, the average salary change was a decrease in pay of $3.18 \%$. Salary decrease was higher among those with lower salaries.

Of the $72 \%$ for whom I have data from one year ago, the average salary change was a $6.25 \%$ increase and the median raise was $5.82 \%$. Of those whose salary changed the average raise was $7.16 \%$ and the median was $13.33 \%$

## Bonuses

This question was changed in the April 2008 survey so it cannot be compared with previous quarters. There are 2 statistics currently monitored, the percentage of those who received bonuses this quarter and the value of those bonuses. It is important to follow this statistic for the entire year because some of the bonuses may be annual bonuses, while others are quarterly bonuses.
